OMP Mobile Hand Wash Station

Most of us are now aware that viruses, germs and bacteria can spread from our palms and fingertips. Being hygienic, especially by washing our hands frequently has never seemed as important as it is now. Furthermore, in the wake of the Covid 19 outbreak, as per the SOP guidelines prescribed by the Ministry of Home Affairs, it is highly advisable to wash hands frequently to mitigate the risk of contracting the disease. The risk of transmission is higher in commercial establishments, worship places, schools, colleges and all other places where several people are required to gather. Even while washing hands, generally, people touch a number of surfaces like the tap, liquid soap dispenser and hand towel where the presence of droplets that spread the virus is very likely. In public places, this will increase the chances of transmission of viruses.

OMP Mobile Hand Wash Station is specifically designed to counter this problem by creating a completely Touch - Free Hand Washing package and thus reducing the risk of transmission of viruses, germs and bacteria.

How is it completely touch free?

OMP Wash station has a

- Pedal operated water tap.
- A sensor operated liquid soap dispenser and
- Space to keep and throw disposable tissues and to place a sensor operated hand dryer.

Essential Features

1. It has a steel bar to push and lockable wheels attached on all four corners making it more mobile. (Insert Image)
2. It is made up of mild steel and stainless steel and further provided with anti-corrosive coating to ensure its durability. (Insert Image)
3. There are lockable doors given to the bottom of the station where everything necessary to run the station is kept.
4. Generally, during a hand - wash, the amount of water spent is much more than necessary due to the design of a typical Wash - Basin tap and the water - pressure generated through it. The design of the tap and the pressure generated by the motor in this product allows just enough water to facilitate a hand - wash. Thus, Water is conserved and used optimally. (Insert Image)
5. When several people use one or few Wash Basin areas to wash hands frequently multiple times during a day, there is a risk of the plumbing systems facing damage. Wash station involves no tap turnings and it is exclusively kept for washing hands and hence avoids another problem.
6. Since the Wash Station would be kept exclusively for washing hands, one would not have to unnecessarily wait in line outside a bathroom where the basin is kept, in case it is being used for something else. It also helps to liquidate the sudden rush of employees, workers or children as in the case of your establishment during lunch or refreshment hours.
7. Over - use of Sanitizers is considered to have a lot of negative effects like dry skin, accelerated aging, damaged skin cells, anti - biotic resistance (resistance against good bacteria) and weakened immune system. The Wash Station allows you to avoid these problems by sticking to the good old soap and water hand - wash much more conveniently.
8. It's simple pedal operated mechanism makes it easier to use for children.
9. Provided with two polycan water containers - one for fresh water and one for waste water with a capacity of 40 Litres each
